

Puddle Flange

An economical and reliable method of hydrostatic sealing, the ideal solution wherever it is not possible to retrofit sleeves or core holes.

- high quality elastomer with stainless steel bands and fasteners
- for permanent and watertight sealing of all types of pipes passing through walls, ceilings, floors, shaft openings, swimming pools and groundwater troughs
- prevents penetration of ground- and pressurised water for pipes up to OD 315 to 5 bar, from OD 355 up to 4 bar
- temperature resistance -40°C to +80°C
- can not be considered as a fix point
- split version for retrofitting on request
- supplied with two stainless steel bands and fasteners
